

CheckLight implements a rapid AOC test in Asian Markets

Tel Aviv, Israel, May 27, 2010 - CheckLight Ltd, a provider of innovative bioluminescence-based solutions for rapid water quality testing and online monitoring, announced today that it has completed successful implementations of its Early-AOC test, in multiple customers' sites in China & Singapore.

The presence of AOC (Assimilable Organic Carbon) in water, has proved to be the best indicator to warn of microbial re-growth that leads to biofilm formation, bad test & odor and proliferation of microorganisms. Yet, the use of the existing standard AOC test method is not common, due to its high cost and long test cycle (7 days to obtain results).

"CheckLight's Early-AOC, which determines the presence of AOC in just 2-3 hours, was warmly accepted by both academic & commercial communities in China & Singapore" says Mr. Moti Blau, VP marketing & BD at CheckLight. "Our customers report that based on the quick results, preventive actions could be taken much earlier than before, saving the high cost associated with the negative effect biofilm has on water quality, equipment maintainability and the expensive cleaning process to follow".

"In addition, we recently signed a first agreement with a California based laboratory, by which CheckLight's Early-AOC tests services will be proposed to its customers as an alternative to the current long and expensive test method used today", added Blau.

About CheckLight

Founded in 2001 by Dr. Nirit Ulitzur, CheckLight Ltd. is a private company, based in Israel. Since its foundation, CheckLight has engaged extensively in developing and marketing technologies for drinking water quality testing applications.

In early 2008 Whitewater (www.w-water.com), a leading Israeli water technologies company, has become a strategic investor in CheckLight.

CheckLight's products are being successfully used by China's Environmental Protection Ministry, leading water labs in Europe, industry customers North America, the Israeli National Water company, and more.
